# Rise to the challenge.

The ORTHO VISION<sup>®</sup> Platform helps blood banks meet the challenges of today and tomorrow.

## Your world is changing.

Labs are experiencing growing pressures to increase productivity but remain operationally efficient – all while faced with budgetary constraints, increased testing volumes and complexity, as well as staffing challenges that jeopardize their ability to achieve their goals. Ortho Clinical Diagnostics has developed a solution to help labs respond to these growing challenges.

With the ORTHO VISION® Platform, you can use a single system to automate more tests than ever before while improving workflow efficiency and lab standardization. It all adds up to greater consistency, and improved outcomes for physicians and patients.

## Power your lab to succeed.

The ORTHO VISION® Platform does more than run your tests.

### Automate more tests:

With the most comprehensive testing capabilities on the market, including serial dilutions (for titration studies and configurable reflex testing) and selected cell panels, the ORTHO VISION® Platform gives you greater staff utilization and improved workflow efficiency while also keeping costs and uncertainty in check.

### Optimize your workflow:

With the ORTHO VISION® Platform, you no longer have to interrupt the rest of your testing workflow – and that means you can optimize turnaround times regardless of the peaks and valleys of incoming orders. It's all designed to help your team meet its core objectives: getting the right blood products out at the right time.

### Enable confidence in you and your staff:

The standardization of ORTHO VISION® brings the skills of your staff to a higher, more consistent level. Plus, the easy-to-use interface is uniform across our platform so lab staff only needs to be trained in one technology.

### Achieve budget efficiencies:

By automating more tests, increasing utilization, reducing true to time to result, and maximizing reagent and card usage, the ORTHO VISION® Platform helps you manage costs.
